

I'm not robot

Continue

for generating document attributes such as a table of contents and footnotes. When the role shorthand (custom) is used on an ordered list, the numeration style is used with the ID prefix and the section with the ID prefix. Once the first section title is reached, content is associated with the section it is nested in. Not set any Header title Sets the value of the element in the HTML or main DocBook of the output document. Man Pages ERROR malformed name section body Invalid manpage document structure. Header with decks backend attributes = Presentation Title Presenter Name :backend: decks:decks: theme: web-2.0 :decks: transition: horizontal-slide navigation: Structuring a slideshow and writing the slide content uses the same syntax as a typical AsciiDoc document, with a few added features. FreeBSD . The directives must also appear at the end of the line. |=|=|= Result: Rendered table comparing cells using AsciiDoc styles and no AsciiDoc styles This cell is prefixed with an a so the following list is rendered with the AsciiDoc list element styles. Select a file in the file navigator and click btn[Open]. An anchor can be defined anywhere: header, image, listing or text block. Once attributes references have been resolved, each value is coerced to a recognized type. Here's an example: * The header in AsciiDoc must start with a document title. Select to reset the zoom level to the default setting. |=|=|= Result: Example block Sample document Here's a sample AsciiDoc document: = Title of Document Doc Writer :toc: This guide provides... Custom CSS class syntax Type the word [userinput]#asciidoc# into the search bar. The modest option enables modest branding for a YouTube video. Markdown-style horizontal rule syntax Result: Markdown-style horizontal rules A macro definition for the Markdown horizontal rules is included in the AsciiDoc compatibility file so they can be recognized by the asciidoc command as well. The following values types are recognized: number Either an integer or floating-point value. Result: Menu macros displaying menu selections To save the file, select . Add the attribute entry :highlightsdir: highlight to the header of your AsciiDoc file. First Chapter 1.1. Subsection Appx A: First Appendix 1.1. First Subsection 1.2. Second Subsection Appx B: Second Appendix You can include a glossary of definitions by including the [glossary] marker before the section header and before the first definition. character, as shown here: [rolename] |=|=| Cell in column 1, row 1 | Cell in column 2, row 1 | Cell in column 3, row 1 | Cell in column 3, row 1 | Cell in column 1, row 2 | Cell in column 2, row 2 | Cell in column 3, row 2 |=|=|= Leading and trailing spaces around cell content is stripped and, therefore, don't affect the table's layout when rendered. Let's move mystyles.css into mydocuments/mystylesheets/. Chat with other AsciiDoctor users in the irc://irc.freenode.org/#asciidocor[AsciiDoctor] or on the "mailing list", role="green". An anchor ID with a defined xreflabel. Each registered class is instantiated when the AsciiDoctor:Document is created. If the AsciiDoctor gem installed successfully, the asciidoctor command line interface (CLI) will be available on your PATH. A discrete title is styled like a section title but is not part of the content hierarchy (i.e., it ignores section nesting rules). decks:backend document attributes Attribute Description Example :backend: decks: Activates the deck.js backend to render the document as a deck.js presentation :backend: decks: :decks: theme: Sets the deck.js theme to neon, swiss or web-2.0 :decks: theme: web-2.0 :decks: transition: Sets the transition style to horizontal-slide, vertical-slide or fade :decks: transition: fade :customjs: Sets a custom javascript file; can be used as a deck.js custom configuration :customjs: :customcss: Sets a custom css file :customcss: :menu: Toggle to and from a grid layout overview of all the slides by pressing the m key :menu: :navigation: Renders clickable previous and next navigation icons on the slides :navigation: :status: Renders the current slide number and total number of slides :status: :split: Registers the split module for use in the document :split: You can also specify a custom stylesheet using the stylesheet attribute, which customizes AsciiDoc elements like section, paragraph, images, etc. When linkattrs is set, you can add a role (i.e., CSS class) to the link. Call the asciidoctor processor. = Document Title :source-highlighter: For example, here's how to enable syntax highlighting using CodeRay: = Document Title :source-highlighter: coderay You can also set the source-highlighter attribute from the command line or API. Book Parts and Chapters ERROR invalid part, must have at least one section (e.g., chapter, appendix, etc.) Invalid book document structure. AsciiDoctor addresses these issues by introducing a proper extension API that offers a superset of the extension points that AsciiDoc Python provides. [quote] Quoted text. The value of this attribute defaults to attributes. html docdate Last modified date of the source document.[1,2] 2015-01-04 docdate Last modified date and time of the source document.[1,2] 2015-01-04 19:26:06 GMT+0000 docdir Full path of the directory that contains the source document. This makes rendering the document optional and gives Ruby programs the opportunity to extract, add or replace information in the document by interacting with the document object model AsciiDoctor assemblies. A delimited listing block is surrounded by lines composed of four hyphens (---). Run Compass's compile command. Text substitution elements replace characters, markup, attribute references, and macros with converter specific styles and values. If you need to upgrade to the latest version immediately, use the gem install option documented above. Setting an anchor ID using the macro form anchor-tiger-image[Image of a tiger] In AsciiDoctor, the xref inline macro is used to create cross references (i.e. links) to sections, blocks or phrases that have an ID (explicit or auto-generated). On the other side of the coin, you don't want the callout annotations or CSS messing up your raw source code either. 2 Then, within a slide, insert m[This content is duplicated across two columns. [glossary] = Part 1 Glossary [glossary] mud: wet, cold dirt = Part 2 [preface] = Part 2 Preface This part was written because... Yet, under all that simplicity, they are remarkably sophisticated. Usually better to apply a role, then apply the formatting based on that role by using a stylesheet. No substitutions are applied to the content within a stem macro or block. The instructions in the example above appear below. The specialchars element searches for three characters (, &) and replaces them with their character entity references. When you want to turn off the numbering, add an exclamation point to the end of the attribute name: sectnums!: = Unnumbered Section For regions of the document where section numbering is turned off, the section numbering will not be incremented. (1) 1 The trailing period will not get caught up in the link. You can find everywhere these days. An apostrophe directly bounded by two characters is processed during the replacements substitution phase, not the quotes phase. If you want icons to display using images, set the icons attribute to an empty value in the document header. |=|=|= Result: Rendered cells aligned horizontally, vertically, and across a span of three columns Prefix the {vbar} with {caret} to center content horizontally Prefix the {vbar} with < to align the content to the left horizontally Prefix the {vbar} with > to align the content to the right horizontally Prefix the {vbar} with a . WARNING invalid style for paragraph: You have a line [xxx] before a paragraph, but xxx isn't one of the built-in styles. Let's assume we are working with the following attribute entry: A long, single-line attribute long-value. If you have a very long line of text that you need to substitute regularly in a document, you may find it easier to split it neatly in the header so it remains readable to the next person reading your docs code. [cols="3**"] |=|=| [Cell in column 1, row 1] [Cell in column 2, row 1] [Cell in column 3, row 1] [Cell in column 1, row 2] [Cell in column 2, row 2] [Cell in column 3, row 2] |=|=|= Result: Rendered table with horizontal, center alignment applied to all columns Cell in column 1, row 1 Cell in column 2, row 1 Cell in column 3, row 1 Cell in column 1, row 2 Cell in column 2, row 2 Cell in column 3, row 2 What if you only want to center the content in the last column? Result: Sidebar with title Example syntax Sample document |=|=|= Here's a sample AsciiDoc document: [listing] **** 1 A title is optional. Catch a Missing or Undefined Attribute WARNING tables must have at least one body row Tables WARNING tag " not found in include file: You tried to include by tagged region, but the included document does not have that tag. AsciiDoctor does not implement the block form of the block macro. The script calls Pandoc to convert single or multiple HTML files exported from Confluence to AsciiDoc files. That's what I'm on about! Did you see him repressing me? html = AsciiDoctor.convert file 'mysample.adoc', to: file: false, header: footer: true puts html The convert methods also accept a map of options. 1 If the document's description is long, you can break the attribute's value across several lines by ending each line with a backslash \ that is preceded by a space. Set the cache-uri attribute in the document. (optional) 5 Enter the excerpt or quote text on the line immediately following the attribute list. Sets the root element when using the docbook backend and the style class on the HTML body element when using the html backend. The default table data format is PSV (Prefix Separated Values), which means that the processor creates a new cell each time it encounters a vertical bar (|). latex (block macro) Use a stem passthrough block Block Stem Content. Monitor Displays information in visual form whether a particular syntax pattern requires unconstrained quotes, consider the following syntactical situations. not set empty User Interface Macros reproducible If set, prevents the last-updated date from being added to the HTML footer or DocBook info element. Prefixing the name with a hash (#). AsciiDoctor has two attributes to alleviate this inconvenience: attribute-missing and attribute-undefined. The styles are: colophon abstract preface dedication part introduction glossary bibliography index These styles are available to the article and book document types, with the exception of the part introduction style which is exclusive to books. To apply a specifier to a column, use the cols attribute and assign it a value. This doctype instructs the parser to recognize a special document header and section naming conventions for organizing the AsciiDoc content as a manual page. For example, if you created the following docinfo file: Docinfo file containing a renumber attribute reference {renumber} And this source document: Source document including a revision number = Document Title Author Name v1.0, 2013-06-01 :doctype: book :backend: docbook :docinfo: Then the rendered DocBook output would be: Document Title 2013-06-01 Author Name AN 1.0 (1) 2013-06-01 AN 1 The renumber attribute reference was replaced by the source document's revision number in the rendered output. 2 The quotes value enables the text formatting to be rendered. This override offers one way to make the conversion reproducible. In the example below, the table has an attribute list containing an options attribute that includes the header option. For XML files you can use the and delimiters Alternately, you can select content by line number. ifdef single line example ifdef:renumber[This document has a version number of {renumber}.] The single-line block above is equivalent to this formal ifdef directive: ifdef:renumber[] This document has a version number of {renumber}. admonition paragraph a callout paragraph that has a label or icon indicating its priority admonition block a callout block containing complex content that has a label or icon indicating its priority backend a moniker for the expected output format; used as a key to select which converter to use; often used interchangeably with the name of a converter (i.e., the "html5" backend") built-in attribute an attribute recognized by AsciiDoctor that controls processing, integrations, styling, and localization cross reference a link from one location in the document to another location marked by an anchor environment attribute a dynamic attribute that pertains to, or gives information about, the runtime environment list continuation a plus sign (+) on a line by itself that connects adjacent lines of text to a list item predefined attribute a convenience attribute for content replacements quoted text text which is enclosed in special punctuation to give it emphasis or special meaning user-defined attribute an attribute defined by the content author. In the DocBook FOP pipeline, this is handled by JEuclid. 5 The next time you reference the footnote you only need to insert the ID in the square brackets. Markdown-style blockquote containing block content > > What's new? Here's an example of a floating block image. The line must begin with a dot (.) and be followed immediately by the title text. HTML output The Dangerous and Thrilling Documentation Chronicles The keywords attribute contains a list of comma separated values that are assigned to the HTML tag. Note that a space will automatically be appended to the separator value. However, by using it, you implicitly set compat-mode. The two examples below illustrate how leading and trailing spaces don't change the rendered table's layout. The doctitle attribute can be referenced anywhere in a document and resolves to the document's title when displayed. If text content doesn't belong somewhere, neither does an inline anchor point. Built-in document attributes can be set anywhere in the document using an attribute entry line. Additionally, you can inspect mysample.html in your browser and see inside the tags. You can tuck your callouts neatly behind line comments. Anatomy of an attribute list [positional attribute,positional attribute,named attribute="value"] apply to blocks as well as macros and inline quoted text can contain positional and named attributes take precedence over global attributes the first positional attribute in the list on inline quoted text is referred to as the role attribute the first positional attribute in the list on blocks and macros is known as the style attribute Named attributes are assigned a value with an = in an attribute list. docinfo attribute values were introduced in AsciiDoctor 1.5.5 to replace the less descriptive docinfo1 and docinfo2 attributes. You can indicate that a section, part, or chapter is an appendix by adding an [appendix] line above the section title. Float pulls the image to one side of the page or the other and wraps block or inline content around it, respectively. These components are referred to as delimited blocks because they are surrounded by delimiter lines (e.g., ****). Literal style paragraph syntax [literal] error: The requested operation returned error: 1954 Forbidden search for defensive operations manual absolutely fatal: operation initiation lost in the dodecahedron of doom would you like to die again? It specifies a predefined set of characteristics that should apply to a block element or macro. If you have suggestions, we want to hear from you! You must set the experimental attribute to enable these macros. > > Another paragraph in quote. Result: Admonition paragraph Wolpertingers are known to nest in server racks. For example, when a document is rendered to HTML, any asterisks enclosing text are replaced with HTML tags. (At least, that's what you call it in the beginning). Elements subject to attributes text substitution Element attributes substitution Attribute value Comment Example Fenced Header Literal Listing Macro Open Varies Paragraph Passthrough Quote Sidebar Source Special sections Table Varies Title Verse The replacements substitution processes textual characters such as marks, arrows and dashes and replaces them with the decimal format of their Unicode code point, i.e. their numeric character reference. ifeval example ifeval::{sectnumlevels} == 3] If the `sectnumlevels` attribute has the value 3, this sentence is included. By adhering to a specific structure in the man page file, the man command can parse the content and present a formatted document in a textual (command line) pager. separately each time you click the Next arrow. AsciiDoctor use the following conventions to determine when the first row should become the header row: The first line of content inside the table block delimiters is not empty. If you plan to reference a footnote more than once, use the ID footnoteref macro {footnoteref}[].
